DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 04/02/2004 has been entered.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 3, 4 and 9 are rejected under 35 U.S.C. 102(e) as being anticipated by Adan (USPN 6,288,425).

Adan discloses the claimed semiconductor device (Fig. 1) comprising a field effect transistor formed on a SOI substrate, the semiconductor device characterized in comprising a gate region 4 formed on a semiconductor film 3 of the SOI substrate; source and drain regions 13b each spaced a specified distance from a channel region 5 formed in the semiconductor film below the gate region; a first extension region 13a that

Art Unit: 2811

extends from the source region to the channel region; and a second extension region 13a that extends from the drain region to the channel region, wherein junction depths of the first and second extension regions 13a are 50% or less of the junction depth of each of the source region and the drain region 13b.

Regarding claims 3 and 9, the device is operating in a fully depleted operation mode (col. 3, lines 59-63).

Regarding claim 4, the SOI substrate is a substrate composed of a glass, quartz substrate and a semiconductor film formed thereon (col. 3, lines 36-40).

Response to Arguments

In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., the dependency of the leak current on the junction depth of the extension regions) are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).
